QUESTION: 1

What can be avoided by writing to a primary master server and using a secondary master server for failover?

- A. indexing errors
- B. initialization errors
- C. replication conflicts
- D. low cache hit ratios

Answer: C

QUESTION: 2

Which three performance measures are important to monitor in a directory environment? (Choose three.)

- A. system status
- B. class of service
- C. database activity
- D. indexing efficiency
- E. schema inheritance

Answer: A, C, D

QUESTION: 3

What are two reasons why you would monitor the ns-slaped process? (Choose two.)

- A. to measure write activity
- B. to verify the server process is running
- C. to ensure the process does not get swapped out
- D. to measure Sun ONE Directory Proxy Server performance
- E. to verify that the cluster membership monitor has not restarted it
- F. to verify it does not exceed maximum process size

Answer: B, F

QUESTION: 4

Which file can you examine to determine if there are any unindexed search?

- A. error log
- B. index log
- C. search log
- D. access log
- E. message log

Answer: D

QUESTION: 5

Click the Task button. Match the monitoring tools with their functions.

Match the monitoring tools with their functions.

Tools	Functions	Tools to be moved
place here	monitors and reports system swap usage	vmstat
place here	continually monitors system resources	df -k
place here	reports virtual memory statistics	swap
place here	reports disk utilization	prstat

Done

Answer:

Match the monitoring tools with their functions.

Tools	Functions	Tools to be moved
swap	monitors and reports system swap usage	vmstat
prstat	continually monitors system resources	df -k
vmstat	reports virtual memory statistics	swap
df -k	reports disk utilization	prstat

Done

QUESTION: 6

Where should you move your custom schema before migration? (Choose two.)

- A. 00core.ldif
- B. slapd.at.conf
- C. slapd.oc.conf
