

# 70-646

## Microsoft

*Pro: Windows Server 2008, Server Administrator*

*OfficialCerts.com is a reputable IT certification examination guide, study guides and audio exam provider. We ensure that you pass your 70-646 exam in first attempt and also get high scores to acquire Microsoft certification.*

*If you use OfficialCerts 70-646 Certification questions and answers, you will experience actual 70-646 exam questions/answers. We know exactly what is needed and have all the exam preparation material required to pass the exam. Our Microsoft exam prep covers over 95% of the questions and answers that may be appeared in your 70-646 exam. Every point from pass4sure 70-646 PDF, 70-646 review will help you take Microsoft 70-646 exam much easier and become Microsoft certified.*

*Here's what you can expect from the OfficialCerts Microsoft 70-646 course:*

- \* Up-to-Date Microsoft 70-646 questions as experienced in the real exam.*
- \* 100% correct Microsoft 70-646 answers you simply can't find in other 70-646 courses.*
- \* All of our tests are easy to download. Your file will be saved as a 70-646 PDF.*
- \* Microsoft 70-646 brain dump free content featuring the real 70-646 test questions.*

*Microsoft 70-646 certification exam is of core importance both in your Professional life and Microsoft certification path. With Microsoft certification you can get a good job easily in the market and get on your path for success. Professionals who passed Microsoft 70-646 exam training are an absolute favorite in the industry.*

*You will pass Microsoft 70-646 certification test and career opportunities will be open for you.*

<b>Exam Name:</b>	<b>Pro: Windows Server 2008, Server Administrator</b>		
<b>Exam Type:</b>	<b>Microsoft</b>		
<b>Exam Code:</b>	<b>70-646</b>	<b>Total Questions:</b>	<b>403</b>

**Question: 1**

Your organization has a Windows Server 2003 R2 Standard Edition computer that is used as an intranet server. Which of the following upgrade paths are possible for this computer? (Each correct answer presents a complete solution. Choose two.)

- A. Windows Server 2008 Datacenter edition
- B. Windows Web Server 2008
- C. Windows Server 2008 Enterprise Edition
- D. Windows Server 2008 Standard Edition
- E. Windows Server 2008 Standard Edition (Server Core)

**Answer: D**

**Question: 2**

Suppose you are the network administrator of your company which contains 40 DNS servers. One of the DNS servers is named DNSServer1 which installs Adminpak.msi. Administrators who manage the DNS servers by using a Remote Desktop Connection (RDC) to connect to DNSServer1 use client computers that run Windows Vista. Now, your company decides to upgrade the 40 DNS servers from Windows Server 2003 to the Server Core installation of Windows Server 2008 and reconfigure the DNS server role. As a network administrator, you need to manage the new DNS servers by using a Microsoft Management Console (MMC). So what should you do?

- A. Create a Group Policy object that deploys Windows PowerShell to all administrators.
- B. Create a Group Policy object that deploys the Windows Server 2003 Adminpak.msi file to all administrators by using.
- C. Prepare a way that makes the client users able to remotely access to the Windows Server 2008 Server Core servers.
- D. Prepare a way that makes the client users able to remotely the Windows Server 2008 server which installs the Remote Server Administration Tools (RSAT).

**Answer: D**

**Question: 3**

You are migrating System Center Configuration Manager 2007 sites from mixed mode to native mode. Which report identifies clients that have successfully switched their site mode configuration?

- A. Summary Information Of Clients In Native Mode
- B. Client Assignment Failure Details
- C. Summary Information Of Clients Capable Of Native Mode
- D. Clients Incapable Of Native Mode

**Answer: A**

**Question: 4**

Suppose an Active Directory domain within which all the domain controllers run Windows Server 2008 comprises your company network. All the client computers in the network run either Windows Vista or Windows XP sp2. Now, as the IT administrator, you are required to implement Encrypting File System (EFS) for all client computers to meet the following requirements: You should minimize network traffic when a user logs on to or off from a client computer. You must make users be able to access their EFS certificates on any client computers. EFS certificates must be accessible when a client computer's disk fails. What should you do?

- A. Make credential roaming enabled.

<b>Exam Name:</b>	<b>Pro: Windows Server 2008, Server Administrator</b>		
<b>Exam Type:</b>	<b>Microsoft</b>		
<b>Exam Code:</b>	<b>70-646</b>	<b>Total Questions:</b>	<b>403</b>

- B. Make roaming user profiles enabled.
- C. Make a Data Recovery Agent enabled.
- D. Send smart cards to all users.

**Answer: A**

**Question: 5**

Suppose there are one main office as well as one branch office in your company. Your company network consists of a single Active Directory domain whose functional level is Windows Server 2008. And you also know that each office has an Active Directory site and all the servers run Windows Server 2008. Now, you are asked to design a file sharing strategy which should satisfy the following requirements to deploy file servers in each office. You should make sure that users in both offices can access the same files. You should make sure that users in both offices can use the same Universal Naming Convention (UNC) path to access files. You should make sure that the design must reduce the amount of bandwidth used to access files. You should make sure that users must be able to access files even if a server fails. Then what should your design be like?

- A. Create a stand-alone DFS namespace which uses replication.
- B. Create a domain-based DFS namespace which uses replication.
- C. Create a multi-site failover cluster which contains a server located in the main office and another server located in the branch office.
- D. Create a Network Load Balancing cluster that contains a server located in the main office and another server located in the branch office.

**Answer: B**

**Question: 6**

Your organization has a single Terminal Server. Users are allowed to connect to the Terminal Server with up to two concurrent sessions. You want to ensure that users who are connected to two sessions do not use more resources on the Terminal Server than a user connected with a single session. Which of the following strategies should you pursue?

- A. Apply the Equal\_Per\_User WSRM policy.
- B. Apply the Equal\_Per\_Session WSRM policy.
- C. Configure the server's properties in Terminal Server Management console.
- D. Configure RDP-Tcp properties.

**Answer: A**

**Question: 7**

Suppose there is one Windows Server 2008 server which has Microsoft SQL Server 2005 installed and 2 RAID 1 arrays and 1 RAID 5 array configured in your company. Now you need to allocate hard disk space on this server with the following requirements, A single hard disk drive fails will not result in data loss. Maximize the performance of the SQL Server application. Minimize the loss of write performance when a hard disk drive fails. Then what should you do?

- A. Store all files on the RAID 5 array.
- B. Store the operating system files on one of the RAID 1 arrays and store the SQL transaction logs on the other RAID 1 array. Keep the SQL database files on the
- C. Store the operating system files on one of the RAID 1 arrays and store the SQL transaction logs on the RAID 5 array. Keep the SQL database files on the other
- D. Store the operating system files on the RAID 5 array and store the SQL transaction logs on one of the RAID 1 arrays. Keep the SQL database files on the other

**Answer: B**

<b>Exam Name:</b>	<b>Pro: Windows Server 2008, Server Administrator</b>

**Question: 8**

Suppose your company ask you to deploy 8 files server which run Windows Server 2008 and all these file servers will connect to Ethernet switches. You need to make sure the data storage solution satisfy the following requirements: You should make sure allocates storage to the servers as needed You should use the existing network infrastructure You should improve the performance to the max extent. You should maximizes fault tolerance Then what??s your solution?

- A. First install Windows Server 2008 Datacenter Edition on each server and then deploy the servers in a failover cluster. Last, deploy an iSCSI storage area network
- B. First install Windows Server 2008 Standard Edition on each server and then deploy the servers in a Network Load Balancing (NLB) cluster. Last, implement RAID 5
- C. First install Windows Server 2008 Enterprise Edition on each server and then deploy the servers in a failover cluster. Last, deploy a Fibre Channel (FC) storage
- D. First install Windows Server 2008 Enterprise Edition on each server and then deploy the servers in a Network Load Balancing (NLB) cluster. Last, map a network

**Answer: A**

**Question: 9**

Your organization has two offices, one located in Sydney and one located in Melbourne. A data center in Canberra hosts infrastructure servers. Both the Melbourne and Sydney offices have their own Terminal Server farms. The offices are connected by a high-speed WAN link. Each office has its own Active Directory domain, which are both a part of the same forest. The forest root domain is located in the Canberra data center and does not contain standard user or computer accounts. For operational reasons, you want to ensure that CALs purchased and installed at each location are only allocated to devices at that location. Which of the following license server deployment plans should you implement?

- A. Deploy a license server to each location and set the discovery scope of each license server to Domain.
- B. Deploy a license server to each location and set the discovery scope of each license server to Forest.
- C. Deploy a license server to the Canberra data center and set the discovery scope of the license server to Forest.
- D. Deploy a license server to the Canberra data center and set the discovery

**Answer: A**

**Question: 10**

Suppose there is one single Active Directory domain in your company, and each of the 3 domain controllers runs Windows Server 2008. What should you do if you are required to design a recovery strategy for Active Directory objects with the following requirement satisfied? The objects in a backup are able to be compared to objects in the live Active Directory database Make the administrative effort as less as possible.

- A. Just restore the backup to a domain controller in a test forest.
- B. First restore the backup to the original location and then use the Active Directory Service Utilities (Ntdsutil.exe) to create a snapshot.
- C. Restore the backup to an alternate location. Use the Activate Directory Installation wizard to create a new domain controller.
- D. First restore the backup to an alternate location and then use the Active Directory Database Mounting Tool (Dsmain.exe) to mount the database.

<b>Exam Name:</b>	<b>Pro: Windows Server 2008, Server Administrator</b>		
<b>Exam Type:</b>	<b>Microsoft</b>		
<b>Exam Code:</b>	<b>70-646</b>	<b>Total Questions:</b>	<b>403</b>

**Answer: D**

**Question: 11**

Suppose there is a single Active Directory domain in your company network and the main office of your company has an internet connection. Now your company wants to set up a branch office which will connect to the main office via a limited bandwidth WAN link, thus the branch office will not be able to access the internet. Besides, the branch office will have 30 servers that run Windows Server 2008. As the IT administrator, you are required to deploy the servers in the branch office with the following requirements meet, Automated Installations Computers must be automatically activated. Reduce the network traffic between the offices as much as possible. Then what will be included in your plan?

- A. Implement Key Management Service (KMS), a DHCP server, and Windows Deployment Services (WDS) in the branch office.
- B. Utilize Multiple Activation Key (MAK) Independent Activation on the servers. Implement a DHCP server and Windows Deployment Services (WDS) in the main
- C. Implement Windows Deployment Services (WDS) in the main office and implement a DHCP server and implement the Key Management Service (KMS) in the
- D. Utilize Multiple Activation Key (MAK) Independent Activation on the servers. Implement a DHCP server in the main office and implement Windows Deployment

**Answer: A**

**Question: 12**

Which of the following steps do you need to take prior to installing CALs on a TS license server? (Each correct Answer presents a complete solution. Choose two.)

- A. Select license server scope.
- B. Set the domain level to Windows Server 2008 functional level.
- C. Activate the license server
- D. Select the license type.
- E. Install Internet Information Services (IIS).

**Answer: A, C**

**Question: 13**

Which of the following environments allows you to initiate an unattended installation?

- A. Windows PE 2.0
- B. Windows NT Boot Disk
- C. MS DOS Boot Disk
- D. Windows Server 2008 Installation Media

**Answer: A**

**Question: 14**

Suppose there is a single Active Directory site in your company and now you are wanted to deploy 1000 new computers which run Windows Vista Enterprise Edition in your company. All the new computers will have Pre-boot Execution Environment (PXE) network adapters installed. But you should keep in mind that you should meet the following requirements: You should support 50 simultaneous installations of Windows Vista Reduce the impact of network operations during the deployment of the new computers as much as possible. Reduce the amount of time required to install Windows Vista on the new computers as much as possible. Then what will be included in your plan?

## OfficialCerts.com Certification Exam Full Version Features;

- Verified answers researched by industry experts.
- Exams **updated** on regular basis.
- Questions, Answers are downloadable in **PDF** format.
- **No authorization** code required to open exam.
- **Portable** anywhere.
- 100% success **Guarantee**.
- **Fast**, helpful support 24x7.
