

GB0-280

Huawei

Constructing Enterprise-level Routing Networks

OfficialCerts.com is a reputable IT certification examination guide, study guides and audio exam provider. We ensure that you pass your GB0-280 exam in first attempt and also get high scores to acquire Huawei certification.

If you use OfficialCerts GB0-280 Certification questions and answers, you will experience actual GB0-280 exam questions/answers. We know exactly what is needed and have all the exam preparation material required to pass the exam. Our Huawei exam prep covers over 95% of the questions and answers that may be appeared in your GB0-280 exam. Every point from pass4sure GB0-280 PDF, GB0-280 review will help you take Huawei GB0-280 exam much easier and become Huawei certified.

Here's what you can expect from the OfficialCerts Huawei GB0-280 course:

- * Up-to-Date Huawei GB0-280 questions as experienced in the real exam.*
- * 100% correct Huawei GB0-280 answers you simply can't find in other GB0-280 courses.*
- * All of our tests are easy to download. Your file will be saved as a GB0-280 PDF.*
- * Huawei GB0-280 brain dump free content featuring the real GB0-280 test questions.*

Huawei GB0-280 certification exam is of core importance both in your Professional life and Huawei certification path. With Huawei certification you can get a good job easily in the market and get on your path for success. Professionals who passed Huawei GB0-280 exam training are an absolute favorite in the industry. You will pass Huawei GB0-280 certification test and career opportunities will be open for you.

QUESTION 1

Which of the following are the right description to the backbone area?

- A. The backbone area ID is 0.0.0.0.
- B. All other areas must connect to the backbone area.
- C. Between the backbone areas it can be disconnected.
- D. Each ABR (Area Border Router) should be connected to at least one backbone area.

Answer: ABD

QUESTION 2

Which of the following are the right description to the adjacency between routers in the OSPF protocol?

- A. Two routers, if they are in bidirectional adjacency, that is, they receive the Hello message from each other, they automatically become adjacent.
- B. If two routers are adjacent, the underlying network between them is probably Point-to-Point.
- C. If two routers are adjacent, the underlying network between them is probably Point-to-MultiPoint.
- D. If two routers are adjacent, the underlying network between them is probably Broadcast. One of them must be a DR or BDR.
- E. Only when the two routers are adjacent will they exchange the LSA message.

Answer: BCDE

QUESTION 3

Two routers running the OSPF protocol are synchronizing the Link State Database. When you check the peer state machine on one of them, it indicates it has reached the FULL state. Therefore, such a conclusion can be drawn that if you check the peer state machine from the other router, it should also indicate that it has reached the FULL state.

- A. True
- B. False

Answer: B

QUESTION 4

To view the information of the DR and BDR in the OSPF area, you can use

- A. Display ospf
- B. Display ospf error
- C. Display ospf interface
- D. Display ospf peer

Answer: A

QUESTION 5

Which is wrong about the BGP protocol?

- A. BGP is a robust routing protocol.
- B. BGP is to check the route loop.
- C. BGP can not summary routes of the same type.
- D. BGP inherits from EGP

Answer: C

QUESTION 6

Which of the following is the way to avoid loop in the BGP protocol?

- A. Record the source of the route in the attribute: origin
- B. Record the AS route in the attribute: AS-Path
- C. Record the next hop in the Next-Hop attribute
- D. Affect the choice of egress for another AS in the MED attribute

Answer: B

QUESTION 7

In the BGP protocol, the function of the community attribute NO-EXPORT is to

- A. Indicate that the route with this attribute should not be notified to any peer out of the alliance
- B. Indicate that the route with this attribute, once received, should not be notified to any BGP peer.
- C. Indicate that the route with this attribute, once received, should not be notified to any EBGP peer.
- D. None of the above

Answer: A

QUESTION 8

BGP community is a group of destinations with public attributes. For a network or an AS there can be only one community.

- A. True
- B. False

Answer: B

QUESTION 9

RTA notifies RTB about a learned route 1.1.1.0/24 from the EBGP peer. RTA and RTB are in the same AS.

The attributes of the route are listed as the following:

local preference:100

MED: 100

ASPATH: 200

Origine: EGP

Nexthop: 88.8.8.1/16

The attributes of the received route by RTB will be

- A. Local preference: null, MED: 100, ASPATH: 200 100 ,Origine :EGP, nexthop: 10.110.20.1/16
- B. Local preference:100, MED: 100, ASPATH: 200 ,Origine: EGP, nexthop: 88.8.8.1/16
- C. Local preference:100, MED: null, ASPATH: EGP, Origine :EGP, nexthop: 10.110.10.1/16
- D. Local preference: null, MED: 0, ASPATH: 100 200, Origine: EGP, nexthop: 88.8.8.1/16

Answer: B

QUESTION 10

Bi-directional Import refers to that routes are imported mutually between routing protocols. To prevent route loop, you can

- A. prohibit route redistributing from 2 different routing processes which runs over the same router into each other.
- B. Use filter-policy import
- C. Use filter-policy export
- D. Use fire-wall

Answer: ABC

QUESTION 11

The route will be matched with each if-match clause under the node of the route-policy in order. Passing one if-match clause means passing the whole route-policy.

- A. True
- B. False

Answer: B

QUESTION 12

How many attributes can every RADIUS packet carry?

- A. 1
- B. 2
- C. 3
- D. Multiple

Answer: D

QUESTION 13

In which ways can VPN benefit the ISP (Internet Service Provider) and VPN user?

- A. ISP can build a long-term cooperation with enterprises and extend the service, taking advantage of the existent network resource.
- B. It is cost-saving for VPN users.
- C. The VPN user can transfer the WAN maintenance task to the profession ISP.
- D. The enterprise can allocate network address to the VPN user in a unified way.
- E. The private data transmitted through the pubic network is guaranteed with security.

Answer: ABCDE

QUESTION 14

Which of the following are right about ESP?

- A. ESP encapsulates the data to an IP packet after encryption to ensure its privacy.
- B. The user can choose the encrypted Hash algorithm to ensure integrity and authenticity of the packet.
- C. In conjunction with anti-replay window and packet authentication, the AH protocol adopts 32 bits sequence number to prevent and defend replay attacks.
- D. Under transmission mode, the AH protocol encrypts the effective data in the IP packet.
- E. Under the tunnel mode, the AH protocol encrypts the entire IP packet.

Answer: ABCDE

QUESTION 15

In what ways that the Integrated Service varies from Best-Effort services?

- A. First Come, First Served.
- B. Guaranteed Service
- C. Controlled-Load Service
- D. Service similar to ISDN

Answer: BC

OfficialCerts.com Certification Exam Full Version Features;

- Verified answers researched by industry experts.
- Exams **updated** on regular basis.
- Questions, Answers are downloadable in **PDF** format.
- **No authorization** code required to open exam.
- **Portable** anywhere.
- 100% success **Guarantee**.
- **Fast**, helpful support 24x7.
